

- Additional Materials Needed:**
- Scissors
  - Glue (tacky glue works especially well)
  - One toothpick (round is preferable to flat - you can also use a second toothpick to spread glue)
  - Two large paperclips
  - *Optional:* Pen or pencil -to roll GMI base around, and to help hold down tabs inside small shapes until glue sets slightly (especially helpful for top sled and GMI base)

Top sled

High Gain Antenna

For both antennas:  
 Cut a slit on the marked line and pull the edges together to make a cup or cone shape. Glue the overlapping edges to hold it together.

GMI Reflector
